

SULFUR FORMING FACILITY

CLIENT - Sinopec
LOCATION - Puguang, China

DESCRIPTION

Matrix PDM Engineering was awarded a contract to build an 8,600 ton per day sulfur forming facility for Sinopec for the Puguang Gas Project. This facility utilizes the Devco II Sulfur Forming Process. Matrix PDM also provided technical assistance for the sulfur handling system.

This facility is China's first large-scale sulfur export facility. An essential step in large scale sulfur production was the adoption of a national standard for Premium Sulfur Product. This standard (GB-T 2449-2006 Sulfur for Industrial Use) mandates moisture content and particle size, which are both met by the Devco II Process.

PRINCIPAL FEATURES

- Engineering and design
- Sulfur forming
- Material handling
