

GAS PROCESSING FACILITY

CLIENT - Confidential
LOCATION - West Texas
COMPLETED - 2015

DESCRIPTION

Matrix PDM Engineering developed an EPC solution leveraging our gas processing expertise, partnerships with key process equipment suppliers, and our modular design approach that allowed our team to deliver an operating facility on schedule.

A modular design, fabrication, and construction strategy allowed us to shorten the schedule and reduce risk and on-site construction time to bring the site online and to market faster; time to market was key for our client and their needs.

PRINCIPAL FEATURES

- Cryogenic plant with refrigeration liquid product treating
- 1,050 GPM amine treater
- (2) 15.5 GPM Triethylene Glycol dehydrators
- 30,000 SCFM regenerative thermal oxidizers
- Emergency flare system
- Residue gas compression
- Liquid stabilizer
- Slug catcher
